

## Quick Guide Bluetooth Music Receiver WM-BT17

Compatible with the following models:

- **BMW:** 1er (E81, E82, E87, E88), 3er (E90, E91, E92, E93), 5er (E60, E61), 6er (E63, E64), X5 (E70)
- **Only in conjunction with:**
  - SA 609 (navigation system)
  - SA 650 (Radio Business with CD-drive)
  - SA 661 (Radio Business with CD-drive)
  - SA 662 (Radio Business)

### Connect the adapter:

1. Remove the radio.
2. insert the plug of the Bluetooth adapter WM-BT17 from the backside of the Quadlock plug into chamber B until it clicks into place. This should work even if the quadlock plug is still on the radio. If the cables are too short or if you can't see the back of the connectors, you can completely disconnect the Quadlock connector from the radio beforehand.

3. Now connect the black ground cable of the WM-BT17 either to the radio housing or to the ground line leading to the radio. Without a good ground connection the function of the adapter is not given.
4. Now connect the red cable (ignition plus +12V) to a switched +12V line. As this is usually no longer present behind the radio, the voltage can be taken from the cigarette lighter or the air conditioner (measurement with multimeter necessary). Ignition on = +12V on / ignition off = 0V on.
5. Establish a Bluetooth connection by enabling Bluetooth pairing and searching for the Bluetooth device ``WM``. You should then set the volume on the connected device to full volume.
6. Before reinstalling the radio, test the function of the adapter. Switch on the AUX function with the mode button or via the menu.

**The AUX function must be enabled. If this is not the case, it must be enabled by a specialist workshop.**
