

## Quick Guide Bluetooth Music Receiver WM-BTMIC28

### Compatible with the following models:

- BMW (E39, E46, E53) from year 09/2002 to 2006
- Nur mit Sonderausstattung SA 602 (On-Board Monitor) oder SA 609 (Navigationssystem)

### In conjunction with the following radios:

- BM54 Board Monitor 16:9 / navigation system

### Connect the adapter:

1. Remove the radio (you will find various instructions on the Internet).
2. Before you disconnect the plugs from the radio, make sure that you have the radio code available to you, as you may need it for the radio after the power interruption.
3. Insert the 3 pole extender (AUX in the picture) of the adapter into the marked connector X14118 behind the radio.

4. Now connect the black ground cable to the radio housing or the black cable directly to a ground cable to the radio connection (usually a thick brown cable). The function of the adapter is not possible without a good ground connection.
5. Now connect the red cable (ignition plus +12V) to a switched +12V line (measurement with multimeter necessary). Ignition on = +12V on / ignition off = 0V on.
6. Position the microphone near the driver in the vehicle (steering wheel fairing, dashboard, etc.). The cable is then routed to the Bluetooth adapter and connected to the microphone input. **Avoid placing the microphone in the immediate vicinity of or on airbags.**
7. Establish a Bluetooth connection by enabling Bluetooth pairing and searching for the Bluetooth device ``WM``. You should then set the volume on the connected device to full volume.

8. Before you reinstall the radio, test the function of the adapter. Switch on the AUX function by pressing the MODE button on the radio.

**If the AUX input cannot be selected, it must be activated at a BMW specialist workshop via Diagnosis Computer Service.**
